HEADLINE

- Bullet Point

HEADLINE

Slides are simplified, visual notecards that capture and reinforce main ideas, not complete thoughts. As the speaker, you should be delivering most of the content and information, not the slides. If your audience is reading your presentation instead of listening to you deliver it, your messaging has lost its effectiveness.

Pare down your core message and use keywords to convey it—you should never have complete sentences unless you're quoting someone or something.

HEADLINE

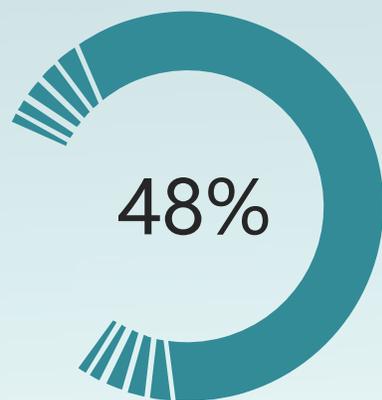

One of the cardinal sins of bad PowerPoints is cramming too many details and ideas on one slide, which makes it difficult for people to retain information. Leaving lots of "white space" on a slide helps people focus on your key points. Following the "6x6" guideline—a maximum of 6 bullet points per slide, and 6 words per bullet—will keep your content concise and clean-looking. In fact, some people even say no more than 6 words on a slide, ever!

Just watch out for "orphans": when the last word of a bullet spills over to the next line. This looks cluttered, so either fit it onto one line, or add another word to the second line.
