BREAKING NEWS

CLIMATE SOLUTIONS

The climate is changing. Extreme weather is hitting our homeland and good supplies around the world. This is most scientists' thinking.

Carbon emissions are one of the risk for climate change. Emissions come from burning fossil fuels. If we want to save our earth, we must lower fossil fuel use. By charging a fee on fossil fuels, the fossil fuels will become "unwelcome".

Fossil Fuel Examples

What can we do? We can use our voices to show political action. We can choose some people to be our leaders. Then, we help our leaders work together. We tell them what we want, as a group.

Government can respond our thinking when our leaders show our thinking for using less fossil fuel use. We tell the government what we want: Having a Livable World. This is what Citizens Climate lobby works for also. To spread the idea that each one of us can deal with climate change.
