

## **Advantages**

1. The teacher uses Google Earth's 3D panoramas and street view features for lessons.
2. The teacher employs group collaboration strategies for discussions, allowing students to work together on tasks.
3. The teacher introduces students to the architectural features of different cultures during class.
4. The teacher moves around the classroom to ensure every student understands the material.
5. The teacher connects lesson content with students' life experiences, boosting their motivation to learn.

## **Suggestions Self-reflection**

1. Since tablets are being used, effective time management becomes even more important.
2. Randomly asking questions could give more students a chance to respond.
3. The teacher could slow down and repeat sentences in English, or let high-achieving students assist with translations.

## **Self-reflection**

In this class, we used tablets for digital instruction, which was a fun and exciting experience for both the teacher and the students. I noticed that students who usually didn't participate much were suddenly eager to share their thoughts and opinions. It was really rewarding to see how much more engaged they became in their learning because of the tablets! Plus, during group activities, I saw students actively helping each other out, creating a friendly and supportive atmosphere. This kind of teamwork not only improved their interactions but also made a real difference in their learning outcomes.
